

DOMAILLE CONNECTOR HOLDERS

Domaille's range of connector holders (10- to 18-port) will accept most types of connector. These include FC, SC and ST spherical polish, LC and MT-RJ small form factor and SCAPC, LCAPC and MT-RJ APC connectors. Between each stage of a polish process, the connector holder lifts for ease and speed of cleaning the ferrules and a drip tray swings under to prevent spillage onto the machine.

These polishing fixtures are manufactured with the superior quality, accuracy and durability found in the Domaille polishing machines. All fixtures are machined from hardened stainless steel for wear and corrosion resistance. Each fixture is uniquely serialized which allows for easy tracking of individual fixture performance. Port numbers are clearly marked for quick and accurate identification. All fixtures have replaceable/repairable ferrule inserts. If one is damaged it can be replaced or repaired, increasing the life span of the fixture.

Features

Fixture insert sizes determined by individual customer requirements at the time the order is placed — a "custom" fixture with low lead time

Capability of polishing two different ferrule sizes with one fixture — a very cost effective solution!

Industry-leading technology provides 360° clamping surface on ferrules — significantly improving yields!

Ease of clamping & unclamping ferrules drastically improves load and unload times — more yield improvement!

Pre-installed water jet ports aid in the elimination of polishing debris during the polishing process — more yield improvement

Use of setting fixture to ensure even ferrule protrusion.

Compatible with all Domaille polishing machine models.

Manufactured to Domaille's exacting standards, using only premium materials.

Description	Order Code
D-4 12-Port Polishing Fixture	PF-D4-12
