

## OLK6 SERIES FIBRE OPTIC TEST KIT

ADVANCED FIBER SOLUTIONS

### Features:

- Compact lightweight carrying case
- Windows application software
- Storage of 500+ results
- Meter calibration certificate included
- dBm (absolute) + dB (relative) measurement
- Meter - display back light
- Meter - graphical display with testing guide
- Meter - auto power off
- Multimode and single mode applications
- Meter - N.I.S.T. traceable
- Zero reference with dBm value displayed
- On screen testing procedure guides
- 650nm, 790nm, 850nm, 1300nm, 1310nm & 1550nm

The OLK6 series test kits are the complete solution necessary for the installer to test, terminate and troubleshoot fibre optic systems. These test kits are designed to allow testing of all parameters of fibre optic networks, including output power levels from the fibre, coupled source power and attenuation loss in a cable. Plastic Optical Fibre and VSCSEL test kits are also available. The POF kits have modular adapters on both the meter and the 665nm/650nm output of the source.

The OLK61-MM is a test kit designed for multimode applications while the OLK61-SM test kit is designed to test single-mode fibre optic cable. The OLK62-D is designed for both multimode and single-mode applications. The OLK6 series test kits come with the OM200 series power meter. The meter is accompanied with the OS420 for multimode applications and OS430 for single-mode applications. A custom test kit can be made for any application. All kits include a carrying case, one connector adapter, cleaning wipes, power adjustment tool and instructional manual.

The OM200 series meter stores 500+ readings and results. Using the supplied Windows® compatible software and USB or serial connection, test records may be transferred to a PC for storage, display, printing, and analysis. The OM200 series meters accept thread-on style adapter caps. The AD100 (2.5mm universal adapter) comes standard with each kit. Other adapter caps required for operation must be ordered separately.
