

## STICKLERS™ CLEANSTIXX™

Each CleanStixx™ swab uses a unique, patented, high-purity fibrous tip to clean fibre optic end-faces. The tip is precision moulded to be slightly narrower than the alignment sleeve. This enables the tip to spin off-centre and greatly improves cleaning results — even on small form factor connectors.

Designed to be used with the Sticklers® Fibre Optic Splice and Connector Cleaner, CleanStixx™ swabs out-perform foam or cloth swabs. Plus, the fast-drying Connector Cleaner makes "wet-dry" cleaning a snap.

Each CleanStixx™ swab is colour-coded for the type of connector it is designed to clean.

- SC, ST, FC, ASC, AFC - blue CleanStixx™
- LC & MU - green CleanStixx™
- MIL-Tac, MT-RJ – red CleanStixx™
- SMA, MPO, MTP, Biconic - clear CleanStixx™

This makes training easy, and with a quick glance you can confirm you have the right CleanStixx™ swab for the job at hand.

The fibres at the tip of each CleanStixx™ swab spread during cleaning. The fibres grab particulate other cleaning swabs can't lift or dislodge. Capillary action wicks liquid contamination off the end-face and up into the fibres, while the tip flexes to conform to connector end-faces, including APC styles, so no extra tools are required.

### Order Codes

| Type  | Connector            | Code    |
|---|----------------------|---------|
| 2.5mm connector cleaning stick (blue label)   | SC, ST, FC, ASC, AFC | MCC-S25 |
| 1.25mm connector cleaning stick (green label) | LC, MU               | MCC-S12 |
